# Electric heating is safe, comfortable, and efficient.

Learn about options available. All offer 100 percent efficient electric heating!

**A plenum heater** sits within your duct work just above your furnace to create a dual fuel system.

**An electric furnace** is a whole-house ducted heating system.

**An electric boiler** heats liquid for radiator, baseboard, and hydronic floor heating systems.

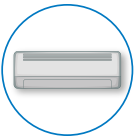

**Electric cable or panel-storage heating** is installed under the slab foundation during new construction.

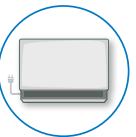

**Install one on our Dual Fuel Rate or RDC Rate and receive rebates.**

**\$500** for installing a 9 kilowatt (kW) to 25 kW system.

**\$20 per kW** for systems 26 kW or larger.

**Install baseboard, cove heat, radiant ceiling, or nonstorage floor warming** (heat that's installed beneath flooring material) on our Dual Fuel or RDC Rate and receive a **\$15 per kW** rebate. A minimum of 9 kW required.

**Off-peak storage heating** creates a reserve bank of heat to ensure comfort. Eligible applications include central furnaces, room units, electric boilers installed to serve underfloor hydronic systems, and underfloor cables or panels. Ice storage cooling systems also qualify.

**Get a rebate of \$40 per kW** on installations of at least 9 kW on our Deferred Load, RDC, or Fixed Time of Delivery Rates. Maximum applies.
