**Warmth while
you save**

Thermal storage can help

Enjoy cozy warmth and cash savings

Thermal-storage heating systems store heat in a bed of sand or in specially designed bricks and release it when you need it. You'll stay warm no matter how cold it gets outside.

And because they store heat, thermal-storage heating systems qualify for our low off-peak rates.

Thermal-storage heating systems are **100 percent efficient**. Central furnace systems may be paired with an air-source heat pump for even greater efficiency.

Options are available for new construction or a renovation.

Choose from:

- Central furnaces.
- Room units.
- Underfloor cable or panel systems.
- Electric boilers installed to serve underfloor hydronic systems.

There are even ice-storage options for commercial cooling installations.

**Get a rebate of
\$40 per kilowatt (kW)*.**

**That's about
\$1,200 for a typical home!**

*To qualify for a rebate, install a minimum of 9 kW on our Deferred Load, RDC, or Fixed Time of Delivery Rate.
