Take control of your heating and cooling with a smart thermostat

Designed to learn your heating and cooling preferences, a smart thermostat is an easy way to save energy and money. If you have an unpredictable schedule, make sure to look for a smart thermostat with geofencing or motion/occupancy sensor capabilities. Geofencing works by using your smartphone's location to determine if you're home or away. And motion/occupancy sensors work in a similar way to make saving as easy as walking out the door.

Electric heating customers

Receive \$100-\$150 for a Tier II or Tier III smart thermostat purchase.

Cooling only customers

Receive \$35-\$50 for a Tier II or Tier III smart thermostat purchase.

Non-central electric heating customers

Receive \$100 for a Tier III qualifying line voltage smart thermostat purchase.
