

- 11 The type of service you're being billed for.
- 12 Service dates of this billing.
- 13 Total kilowatt-hours (kwh) used for each type of service.
- 14 The Energy Adjustment includes the cost of fuel we use to generate electricity to serve our retail customers, transportation costs for that fuel, and costs we incur to buy energy to supplement our own power plants.
- 15 The Resource Adjustment reflects eight costs:
 1. The Conservation Improvement Program (CIP) surcharge represents our investment in energy efficiency programs that help our customers save energy.
 2. The Transmission Cost Recovery Rider allows our company to recover costs associated with transmission additions designed to meet our customers' energy needs, accommodate the delivery of additional renewable energy, and enhance transmission system reliability.
 3. The Environmental Cost Recovery Rider allows our company to recover costs that we incur to meet new state or federal environmental quality requirements for our electric generating facilities.
 4. The Renewable Resource Adjustment allows our company to recover costs previously offset by production tax credits associated with our renewable energy facilities.
 5. The Energy-Intensive, Trade-Exposed (EITE) Surcharge Rate applies to customers who do not qualify for the EITE rate. Minnesota's energy policy supports lower electric rates for energy-intensive, trade-exposed customers.
 6. The Revenue Decoupling Mechanism (RDP) Rider supports customer adoption of Distributed Energy Resources and works in conjunction with CIP by neutralizing the impact of reduced sales due to promotion of energy conservation efforts.
 7. The Electric Utility Infrastructure Cost (EUIC) Recovery Rider allows our company to recover costs incurred for advanced metering infrastructure and outage management system.
 8. The Uplift Program Rider allows our company to recover the costs associated with an affordability program for residential customers that qualify for the Low-Income Home Energy Assistance Program (LIHEAP).

The cost of electricity is composed of three main parts: generation, transmission, and distribution. For residential customers, each component's share of the total cost is:

Generation	46%
Transmission	15%
Distribution	39%

These percentages are residential group averages. Your individual use may result in percentages that vary from these averages.
Above percentages may not total 100% due to rounding.
